

Original Code

```
class Solution(object):
    def removeElement(self, nums, val):
        i = 0
        for x in nums:
            if x != val:
                nums[i] = x
                i += 1
        return i
```

Prompt Applied
E.1: for loop to
while loop.

Adversarial Code

```
class Solution(object):
    def removeElement(self, nums, val):
        i = 0
        j = 0
        while j < len(nums):
            if nums[j] != val:
                nums[i] = nums[j]
                i += 1
            j += 1
        return i
```
